River survey recording sheet

Testing the Bradshaw model | one sheet per site

1 Site

Site name / number	Group	Date	Time

Distance from source (m)	GPS latitude	GPS longitude	Weather

Site conditions (tick all that apply):

☐ Bridge nearby ☐ Weir or dam ☐ Reinforced banks ☐ Tributary joins upstream ☐ Rain in last 48 h

Land use: ☐ Woodland ☐ Farmland ☐ Parkland ☐ Urban ☐ Other: _____

2 Channel cross-section

Wetted width (m)	Gradient (degrees)	Interval between depth readings (m)

Depth (cm) at equal intervals from left bank:

1	2	3	4	5	6	7	8	9	10	11	12

Sketch the cross-section (looking downstream, left bank on the left). Mark where each bed load piece was collected.

Left bank Right bank

3 Velocity

Method: ☐ Flow meter: revolutions over a time ☐ Flow meter: direct m/s ☐ Float

	Attempt 1	Attempt 2	Attempt 3	Attempt 4	Attempt 5
Revolutions or m/s					
Time recorded (s)					

Hold the flow meter at about 60% of the depth. For floats, write the float distance here: _____ m

4 Bed load sample (10 pieces, collected across the channel)

Piece	Distance from left bank (m)	Length, a-axis (mm)	Size gauge: smallest square it passes through	Powers roundness (circle)
1				1 2 3 4 5 6
2				1 2 3 4 5 6
3				1 2 3 4 5 6
4				1 2 3 4 5 6
5				1 2 3 4 5 6
6				1 2 3 4 5 6
7				1 2 3 4 5 6
8				1 2 3 4 5 6
9				1 2 3 4 5 6
10				1 2 3 4 5 6

Powers roundness scale

1 Very angular **2 Angular** **3 Sub-angular** **4 Sub-rounded** **5 Rounded** **6 Well rounded**
